

Feel Great

Two products + one practice
= measurable results

There's a difference between simply getting through the day and truly feeling great. The Feel Great System is Unicity's simplified, science-backed approach to better metabolic health. It combines Unimate and Balance—two powerful, clinically supported supplements—with the sustainable practice of intermittent fasting.

Rather than relying on extreme diets or willpower alone, the Feel Great System helps you work with your body's natural rhythms. It supports stable blood sugar, better energy, improved focus, and fewer cravings—so you can build habits that last.

Whether your goal is to manage your weight, take control of your energy, or just feel like your best self again, **the Feel Great System provides a simple foundation to get started—and stick with it.**

Unimate®

A high-quality yerba mate extract that boosts focus and energy, and supports healthy blood sugar—perfect for starting your day and controlling your appetite.

This highly concentrated yerba mate drink contains a unique blend of plant compounds known to:

- Promotes natural GLP-1 production
- Improve mood
- Boost energy
- Heighten mental clarity
- Suppress appetite

Balance®

A diverse blend of soluble fibers taken with meals to help control blood sugar spikes, maintains fullness, and support healthy digestion.

This proprietary blend of fibers, nutrients, and plant compounds are specifically designed to:

- Coat your meal in a matrix of fibers to moderate your blood sugar response
- Slow carbohydrate absorption so you stay full longer
- Promote proper digestion and cholesterol absorption
- Provide 13 essential vitamins and minerals

Feel Great

Intermittent fasting

Intermittent fasting is an eating style where you limit your meals to an 8-hour window each day, such as between 11 a.m. and 7 p.m. Studies show that intermittent fasting can improve insulin sensitivity, support blood sugar control, and promote a healthy weight. However, despite its benefits, many people find it difficult to stick with it long term. That's where Unimate and Balance come in. These products are designed to work synergistically to support your metabolism, energy, and satiety, making it easier to go longer without eating and easing the transition into a fasting routine. If fasting feels overwhelming at first, the best place to start is simply by using the products consistently—your body will naturally signal when it's ready to extend the fasting window.

Benefits

- Supports healthy blood sugar and insulin levels*
- Helps curb appetite and reduce cravings*
- Supports cognitive function and mental clarity*
- Encourages time-based eating and intermittent fasting*
- Promotes sustained energy and improved mood*
- Aids in healthy weight management*
- Promotes better overall well-being*

Features

Backed by clinical science and user experience

Complements intermittent fasting with appetite and energy support

Naturally flavored

Naturally sweetened with stevia extract

Designed to promote metabolic flexibility and a sustainable lifestyle

Convenient single-serving stick packs

Feel Great

Use

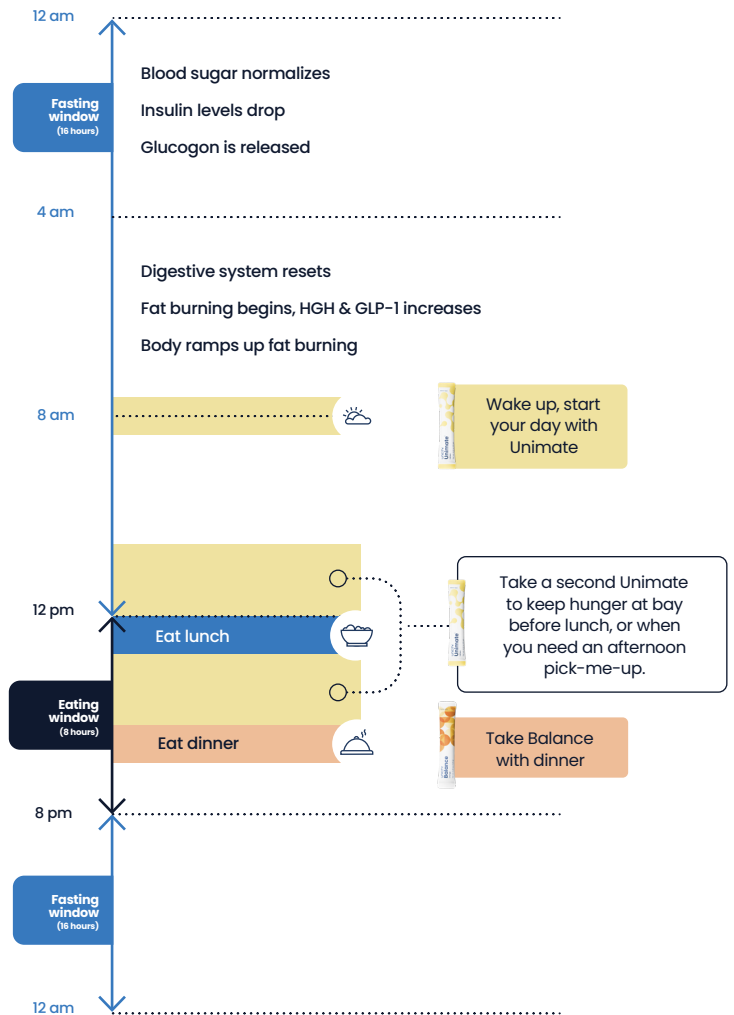

Use the Feel Great System daily for best results:

- Morning: Mix one stick of Unimate with 17–24 oz (500–700 mL) of hot or cold water and drink on an empty stomach to support satiety and extend your fast.
- With meals: Mix one stick of Balance with 8–10 oz (240–300 mL) of water and drink immediately with your two main meals. Balance helps reduce carbohydrate absorption, support blood sugar levels, and increase satiety.

This rhythm promotes an eating window (commonly 12–8 p.m.) that simplifies intermittent fasting and helps reset your metabolic health.

Ideal for

- Anyone looking to simplify intermittent fasting
- Individuals wanting better blood sugar control and energy
- Those working toward healthy weight management
- People looking to curb cravings and snacking habits
- Busy professionals, parents, and students who want to feel great daily

Feel Great

Feel Great Science

Feel Great isn't just another wellness trend—it's built on **real science** and clinical evidence.

Unicity's products have been featured in published peer-reviewed studies, clinical trials, and independent research. In one of several clinical studies on the Feel Great System, participants saw a 12% drop in glycemic variability—the daily blood-sugar swings that signal and worsen insulin resistance—showing how Feel Great helps quiet the very instability that drives metabolic problems (Figure 1).

In another study, individuals using the Feel Great System experienced significant improvements in weight, waist circumference, cholesterol, triglycerides, and blood sugar—all key clinical indicators of metabolic health (Figure 2).

Finally, an independent study demonstrated that Unimate naturally increases the body's levels of GLP-1, a hormone that plays a pivotal role in blood sugar and appetite regulation. This natural GLP-1 plays the same role as popular GLP-1 medications but without the side effects. (Figure 3).

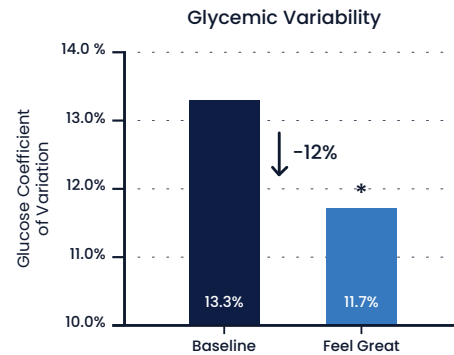

Figure 1
Feel Great, a dietary supplement and intermittent fasting program, improves glycemic variability in adults.

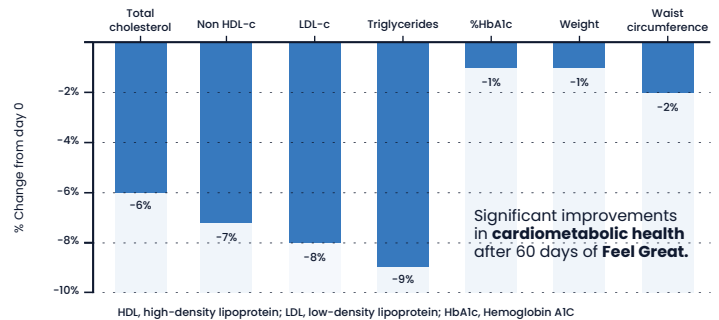

Figure 2
The "Feel Great" program improves cardiometabolic health outcomes in adults.

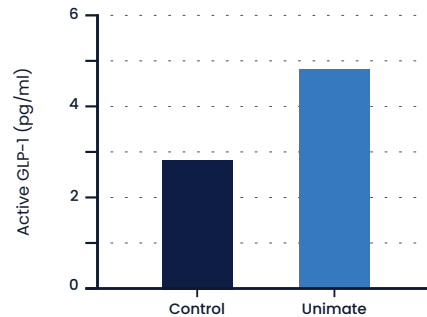

Figure 3
Active GLP-1 was significantly higher with four weeks of Unimate consumption relative to control (water only).

Feel Great

FAQs

What is Feel Great?

The Feel Great system is a simple two-step metabolic health routine designed to support weight management, energy, appetite control, and intermittent fasting. It includes Unimate in the morning for mental clarity and energy, and Balance before meals to curb appetite, support blood sugar balance, and reduce carbohydrate absorption.

Can I use Unimate and Balance together?

Yes. They are designed to be used in tandem. Unimate helps you extend your fast, stay energized, and feel mentally sharp. Balance prepares your body to handle meals more effectively by reducing the impact of carbohydrates and curbing appetite.

Will this program break my fast?

Unimate does not break a fast and is ideal during fasting periods. Balance is taken before meals and is designed to work synergistically with intermittent fasting patterns.

Is the Feel Great system safe for everyone?

The system is intended for healthy adults. If you're pregnant, nursing, on medication, or have a medical condition, consult with your healthcare provider before use. Unimate contains natural caffeine and is not recommended for children or caffeine-sensitive individuals.

Can I take Balance if I've already eaten?

For best results, Balance should be taken before meals. However, if you forget, it's still beneficial to take it after eating to support digestion and cholesterol management.

Will I feel different when starting this program?

It's common to experience increased energy, improved focus, and reduced cravings. When adding Balance, some people may notice mild bloating or gas at first — a normal response to increased fiber intake. These symptoms typically subside within a few weeks.

How much caffeine is in Unimate?

Each serving contains roughly the same amount of caffeine as a cup of premium coffee. However, theobromine and chlorogenic acids help smooth the energy curve and promote a calm, focused mood.

Is the Feel Great system suitable for keto or low-carb diets?

Yes. Unimate helps support ketone production and mental clarity, while Balance assists with stabilizing blood sugar and reducing carb absorption — making both ideal for low-carb lifestyles.

What if I miss a dose?

Just resume the next scheduled use. With Balance, it's better late than never, and with Unimate, you can use it whenever you need a boost in focus or to help manage cravings. Please note that Unimate contains naturally occurring caffeine, which may not be suitable for evening use if you're sensitive to caffeine.

Unimate Decaffeinated

FAQs

How is Decaffeinated Unimate different from other Unimate options?

Decaffeinated Unimate goes through a proprietary patent-pending process to lower the amount of naturally occurring caffeine while working to maintain chlorogenic acids, antioxidants, and feel-good support as the original Unimate. We still standardize every serving of Unimate to chlorogenic acids that contribute to the benefits you know and love. Decaffeinated Unimate contains less than 15 mg of caffeine per serving, while other Unimate flavors offer roughly the same amount of caffeine as a cup of coffee with some slight variances.

How much caffeine is in one serving of Decaffeinated Unimate?

Less than 15mg per serving.

Is this product compatible with ketogenic or other low-carb diets?

Unimate is ideal for keto or other low-carb diets because it helps make the body more efficient at producing ketones, the body's quick energy source from fat. Unimate prevents that tired, empty, listless feeling that comes from not having enough to eat because it helps the body use stored fat for energy.

What are mate saponins?

Mate saponins are a class of saponin molecules that are specific to the yerba mate plant. Mate saponins have been shown to have significant biological effects, particularly in the realm of weight loss and fat burning.

How is this product different from Unicity Matcha?

The two products differ in the types of energy they provide: Unicity Matcha supports physical energy, and Unimate supports mental energy. Matcha increases the amount of energy (ATP) produced, resulting in more cellular energy. Unimate promotes an improved mood, a sense of well-being, and it promotes the feeling that you can accomplish anything. Additionally, since Unimate also enhances ketone production, ketones can provide energy as well.

Why can't pregnant or nursing women use this product? Can kids use Unimate?

Unicity does not test products on children, pregnant women, or nursing women. Therefore, Unicity cannot recommend usage for these demographics.

What are chlorogenic acids?

Chlorogenic acids are a family of polyphenolic compounds found in plants and seeds, such as yerba mate, green coffee beans, and tea. They have important biological effects, including supporting healthy blood pressure, supporting healthy brain function, and promoting an improved mood. Unimate contains around 20 times more chlorogenic acids than standard yerba mate drinks.

What is theobromine?

Theobromine is a molecule that is similar in structure to caffeine. It is perhaps best known as the mood-boosting molecule found in high-quality chocolate. Theobromine promotes feelings of calm, improves focus, and reduces mental fatigue.
